Contents

1 Today's Session Summary

1.1 Keyboard and OTP Input Fix

Status: COMPLETED

Users could not complete login because the OTP input field disappeared when the keyboard appeared.

Solution:

- Restructured KeyboardAvoidingView hierarchy
- Changed behavior from "position" to "padding" on iOS
- Fixed keyboard vertical offset

Files Modified: LoginScreen.tsx, theme/styles.ts

2 Phase 2: What Has Been Completed

2.1 1. State Management with Zustand

Status: COMPLETED

- Created authStore.ts for authentication state
- User data persisted with AsyncStorage
- Eliminates prop drilling throughout the app
- Used in Home screen and other components

2.2 2. Performance Optimization

Status: COMPLETED

- FlashList: Replaced ScrollView with FlashList in RosterList
- React.memo(): All components wrapped for memoization
- useCallback: All event handlers wrapped
- useMemo: Derived state optimized
- Packages Added: @shopify/flash-list, zustand

2.3 3. API Integration - Connected Screens

Status: COMPLETED

2.3.1 Home Screen

- teeTimeApi.getUpcoming() - Fetches upcoming tee times
- useAuthStore - Gets user data from Zustand store

2.3.2 Roster Screen

- friendApi.getFriends() - Fetches friends list
- rosterApi.getGroups() - Fetches user's groups
- rosterApi.createGroup(), updateGroup(), deleteGroup()

2.3.3 Availability Screen

- friendApi.discoverUsers() - Discovers nearby golfers
- friendApi.sendRequest() - Sends friend requests
- rosterApi.addToRoster() - Adds friends to roster

2.3.4 Create Tee Time Screen

- teeTimeApi.createTeeTime() - Creates new tee times
- friendApi.getFriends() - Gets friends for player selection
- inviteApi.createInvites() - Sends invites

2.3.5 Invites Screen

- inviteApi.getPendingInvites() - Gets received invites
- inviteApi.getSentInvites() - Gets sent invites
- inviteApi.respondToInvite() - Accept/decline invites

2.4 4. UI/UX Improvements

Status: COMPLETED

- Renamed "Roster" to "Players" in BottomNav
- Changed tick icon to info icon for accepted friends
- Added "Add to Roster" button for friends
- Modular Home screen with reusable components

3 Phase 2: What Is Left (Known Issues)

3.1 1. First Come First Serve (FCFS) Invite Type

Status: NOT IMPLEMENTED

Current State:

- UI exists in InviteTypeStep.tsx with three options
- Backend has inviteType field
- FCFS logic not implemented - all types behave the same

What Needs To Be Done:

- Implement FCFS queue logic in backend
- Auto-accept first N responders
- Move late responders to waitlist
- Frontend UI to show FCFS status

3.2 2. Group Creation - Members Not Added

Status: BUG

Current State:

- Group creation API works
- Group list displays correctly
- Edit and delete work

Bug: When creating a group, selected members are NOT added to the group. The selectedMembers array is collected but never sent to backend.

Fix Required:

- After createGroup() succeeds, loop through selectedMembers
- Call updateMemberGroup(rosterId, groupId) for each member

3.3 3. Group Detail - Uses Mock Data

Status: NOT CONNECTED

Current State:

- GroupDetail screen shows static mock data
- "Group chat", "Add tee time", "Add people" buttons non-functional
- Uses GROUP_MEMBERS from mockData.ts

What Needs To Be Done:

- Connect to rosterApi.getGroupMembers()
- Implement "Add people" functionality
- Implement "Add tee time" for group invites

3.4 4. Drag and Drop

Status: ABANDONED

Abandoned due to native module conflicts (react-native-reanimated version mismatch). Backend API exists but frontend not implemented.

3.5 5. Messages/Chat

Status: MOCK DATA ONLY

No real messaging backend. UI exists with mock conversations.

3.6 6. Profile Screen

Status: PARTIAL

UI done, API partially connected. Needs full integration with profileApi.

4 Completion Status Summary

Feature	Status	Notes
State Management (Zustand)	100%	Fully implemented
Performance Optimization	100%	FlashList, memo, callbacks
Home Screen	100%	Connected to APIs
Roster List	100%	Connected to friendApi
Groups List	80%	Create works, members not added
Group Detail	30%	Uses mock data
Availability Screen	100%	Discover, add friends works
Create Tee Time	90%	FCFS logic missing
Invites Screen	100%	Accept/decline works
Profile Screen	50%	UI done, API partial
Messages/Chat	10%	Mock data only
Keyboard/OTP Fix	100%	Fixed today
Overall Phase 2	**75%**	

5 Priority Items for Next Session

5.1 High Priority

1. Fix Group Member Assignment in GroupsList.tsx
2. Connect GroupDetail to rosterApi.getGroupMembers()
3. Implement FCFS Logic in backend

5.2 Medium Priority

1. Connect Profile screen to profileApi
2. Connect FullCalendarScreen to teeTimeApi.getCalendar()

6 Conclusion

Phase 2 is approximately 75% complete. Core infrastructure (state management, performance, API services) is solid. Main gaps are:

1. Group member assignment not working
2. GroupDetail using mock data
3. FCFS invite type not implemented
4. Messaging is mock only

The keyboard/OTP fix completed today removes a critical blocker for user authentication.

Document Information

Report Date:	December 20, 2024
Phase:	Phase 2 - Mobile App Development
Overall Completion:	75%
Critical Issues:	3 (Groups, FCFS, GroupDetail)
