TeeTime Golf App

Development Session Summary

Development Team

December 13, 2025

1 Session Overview

UI/UX improvements, feature implementation, and code refactoring for maintainability.

2 Features Implemented

2.1 Messages Section

- Three-tab interface: All, Tee Times, Groups
- Message list with avatars and unread badges
- WhatsApp-style chat detail with message bubbles
- Real-time message sending and display

2.2 Full Calendar View

- Interactive calendar with real dates
- Month navigation with event indicators
- Tee time details for selected dates
- Confirmed/Pending status badges

2.3 Profile Section

- Profile photo with User icon placeholder
- Edit mode for all fields
- Basic Info: Name, Email, Phone, Location, Handicap
- My Equipment: Driver, Irons, Putters, Balls
- Playing Preferences: Tee Time, Walk/Ride, Partner
- Settings and Sign Out functionality

2.4 Roster Management

- Four tabs: Roster, Groups, On Deck, Requests
- Person detail view with contact info and stats
- Group detail view with members and tee times
- Quick actions: Message, Invite, Add to group

3 UI/UX Fixes

- Fixed message input collapse while typing
- Fixed navbar position consistency
- Added User icon placeholder for empty avatars
- Consistent bottom navigation across screens

4 Code Refactoring

4.1 New Shared Components

- `Avatar.tsx` – Reusable avatar with placeholder
- `BottomNav.tsx` – Shared navigation bar
- `colors.ts` – Centralized color constants

4.2 Modular Structure

- Profile screen split into 4 files (was 692 lines)
- Roster screen split into 8 files (was 1215 lines)
- All files now under 350 lines

5 Backend Changes

- Removed OTP request rate limit (used for login)
- Routes updated: `/request-otp`, `/register`

6 File Structure

```
TTSGolfApp/
 components/common/    (Avatar, BottomNav)
 constants/            (colors.ts)
 screens/
    profile/          (4 files, ~150 lines each)
    roster/           (8 files, ~100-200 lines each)
    HomePage.tsx
    MessagesScreen.tsx
    ChatDetailScreen.tsx
    FullCalendarScreen.tsx
 App.tsx
```

7 Ready for Next Steps

- Backend API integration
- Real-time messaging (WebSocket)
- Image upload functionality
- Push notifications
